When is case law on the web the “official” published source? Criteria, quandaries, and implications for the US and the UK

by Richard J Matthews

Online legal resources in the US are starting to become the sole official published source for the law. This demands attention to authentication procedures, as well as appropriate long-term preservation methods, to ensure those resources are reliable. This article explores the concept of an “official” published source as applied to US and UK law material. The web shapes that concept and gives new significance to the citizen perspective on legal resources. That perspective raises special concerns about new developments in the UK that confer official status on proprietary reports not freely available on the web.

There is a substantial and ever-growing number of publicly-accessible online legal resources. Focusing on court decisions on the web may help one to get a firm grip on a small corner of a larger problem involving the entire spectrum of such materials.

The small corner addressed in this article is the official or unofficial status of legal resources on the web. Having a firm grip on that small corner would amount to having a good understanding of which publicly available sources are official and which are not. The larger problem is having an understanding of what, if anything, may be needed when the online legal resource is the sole official published source of the information.

It is increasingly the case that online legal resources are the sole official published source. When they are, the official status of the resource warrants deeper scrutiny, a second very critical look. The concept of official status has some complexity. I argue that, in the long run, in an all-digital world, the concept of official status is meaningful only when sources have been safeguarded by authentication procedures.

THREE THESES

This article makes three principal claims, asserted as three theses. Thesis I is that, reasonably construed, law in some cases has addressed the official or unofficial status of certain legal resources on the web. Thesis II is that, outside of law, convention is taking hold – or has done so already – carving out as official certain legal resources on the web. Thesis III is that the concept of official status is generally very useful and important. Official status is given to authoritative and reliable sources. With web resources, however, the trust engendered by official status is ill-placed – and at some level misplaced – where the official legal source is not safeguarded by authentication procedures.

These theses are not proved in order. Instead, I use them – naming “Thesis I,” “Thesis II,” and “Thesis III” – as touch points to hold together a discussion that must range over the law of multiple jurisdictions. This article is comparative. It reckons with law in the US, at the federal and state levels – particularly state levels – and law in the UK.

The overall situation in the UK is much more definite than in the US. It involves Thesis I claims, but with interesting subtleties. As demonstrated below, understanding the official or unofficial status of online UK court decisions involves an interplay of laws and conventions concerning print sources, with somewhat counterintuitive results. The work of several British legal thinkers interested in UK law reporting, particularly
Michael Zander (London) and Roderick Munday (Cambridge), informs our conclusions, as does work of Peter Clinch and Guy Holborn.

The situation in the US is problematic. It involves some Thesis II claims that convention is carving out as official certain online legal resources, as well as Thesis I claims. The problematic state of the law in the US prompted the American Association of Law Libraries (AALL) to undertake a survey as to which states, if any, have official and authenticated primary legal resources on the web. The AALL Authentication Survey and recent work by Peter Martin (Cornell) contribute to our conclusions.

Efforts by the US Government Printing Office to develop the “future digital system” (FDsys), intended eventually to replace the bulk of print distribution of government information, were an important prompt for the AALL survey. The US federal government is concerned to ensure authentic information in an all-digital world, the situation where the authority and reliability of information is no longer anchored in widely-distributed paper sources.

The UK does not appear to have started efforts similar to those of the US Government Printing Office. As for US states, the AALL survey found that no state governments have begun to address authentication suited to an all-digital world, although a number of states have begun to publish certain official legal resources on the web, discontinuing their print official counterparts. The State-by-State Report on Authentication of Online Legal Resources, the final report of the AALL Authentication Survey, will be published in April 2007.

It is hoped the following exploration of US and UK legal resources on the web provides useful insights into the interrelation between technological innovation and system change. Both the US and the UK appear to be moving toward an all-digital legal information environment. Relevant evidence is abundant. New evidence coming out of the AALL Authentication Survey reveals that 10 states, plus DC, have deemed as official one or more of their online legal resources. Five states from that count have also discontinued a print equivalent. This has happened primarily with administrative rules publications — generically, in the US, administrative codes and administrative registers.

From evidence in Ohio, discussed below, it has certainly begun to occur to state courts to move in the same direction. Movement toward the all-digital world has been accompanied by significant system changes. The UK has undergone and is undergoing remarkable changes to its legal system. The extent to which these can be traced to new information technologies is difficult to gauge, but UK programs advancing “joined up” electronic government definitely make such technologies a very visible factor in the causal mix.

**PROBLEM OF OFFICIAL OR UNOFFICIAL STATUS ON THE WEB**

Does it matter whether online or any other format of legal resources is deemed as official? It may be asserted that official status has no intrinsic significance and is no more or no less than what statute- or rule-defined characteristics those resources may possess. In the case of UK court decisions, the notion of an official or authoritative version is a relatively recent development. The situation with UK statutes is different; their characteristics are shared by US session laws in many respects. For US statutes, whose codification may be the result of compilation or positive re-enactment, the attributes of official versions may vary considerably.

My answer, reiterating the Thesis III claim, is that the concept of official status is generally very useful and important. Properly understood, it has a renewed significance for US and UK legal resources on the web, particularly in an increasingly digital world.

The concept of official status is well-recognised in the US. There is surprisingly little literature defining the concept, however. There is even less in the UK, where the concept is fundamentally less entrenched. The term “official” is used widely in US legal bibliography to distinguish certain publications from a substantial amount of publishing activity tagged as unofficial.

Black’s Law Dictionary, an authoritative US reference source, does not provide a general definition of official, but has an entry for official report (usu. pl.), which reads: “The governmentally approved set of reported cases within a given jurisdiction.” Fundamentals of Legal Research, a major text in US legal education, observes of US law publishing:

> American legal resources, whether books, electronic databases, or other media, can be divided into those that are official, and those that are unofficial. This distinction is important but often misunderstood. An official publication is one that has been mandated by statute or governmental rule. It might be produced by the government, but does not have to be.

The work goes on to note that the distinction is misunderstood in connection with citation rules that “often require both official and unofficial citations.” As well understood in UK legal research, especially with statutes, unofficial publications are often more useful than official publications. For the same reason, courts in the US often require both official and unofficial citations. The authority of those citations may be said to be equivalent, at least in American law, insofar as judicial notice of the law is generally not a matter of evidence of the law as taken from any particular text, although that rule has countless exceptions, as found in statutes that authorise official publications.

Even the straightforward definition of official report given in Black’s Law Dictionary is qualified (without analysis)
by quotation from the foundational 1914 edition of the US law research textbook, Brief Making and the Use of Law Books:

“[I]t may justly be said that all reports are in a sense ‘official,’ or that to use the term ‘official reports’ as referring to any particular series of reports is a misnomer, for it is certainly misleading. The mere fact that each state authorises or requires publication of reports of its Supreme Court decisions, and, to ensure such publication, agrees to purchase a stated number of each volume of the reports, cannot be said to give a series pre-eminence as an ‘official’ publication.”

The extent to which the author here is informed by British tradition, which historically has eschewed the concept of official reporting of court decisions, is unclear. The author evidently is not concerned in this passage with the prescriptive dimension of the definition of official. Used properly, the term official addresses the reliability and, for the US especially, the approved textual integrity of the source.

I turn now to UK authorities to complete this comparative overview of the meaning and significance of the concept of official status.

Jowitt’s Dictionary of English Law does not have an entry for the term official. Nor does it have an entry for official report, which is not unexpected, particularly since Jowitt’s was last supplemented in 1985. Insofar as this leading dictionary tracks and analyses trends affecting use of legal terms, one expects it might in a future update comment on the implied recognition of official reports as referred to in recent Practice Directions addressing citation of authorities. These Practice Directions are explored below.

The situation with official status in the UK is somewhat more complex than in the US. One must appreciate the oral tradition of British courts. An aspect of that tradition regards the common law as principle existing apart from any text. A new privileging of written decisions may be associated with the rise of the web and related text processing efficiencies.

Butterworth’s Legal Research Guide, a highly-respected work, uses the term “official” extensively, but unfortunately does not define it. It is clear from that work and others that UK authors find the term has utility for discussing web resources. More than in the US, the term official carries in the UK associations with government documents, as in the British term “official publications.” In the US, the term has a weaker association with government documents. The US has substantial experience with commercial publication of official legal resources. The term is useful to distinguish government-endorsed commercial publications from non-endorsed commercial publications. The notion of endorsement is central to US legal bibliography; overall, endorsement has little role in UK publication, recent Practice Directions notwithstanding.

WEB GIVES NEW MEANING TO THE TERM OFFICIAL

The web creates an immediate connection between users and government publishers. It gives the term official new significance. When a court publishes a decision on the web, it can scarcely deny that it is an official publication, absent elaborate qualifications. Speaking as an experienced law librarian, to many – if not most – citizens, publicly available online legal resources are the only actual primary legal sources to which those citizens have ever had access or exposure. Distinctions that would make government-published information unofficial are artificial. They are meaningless and, at worst, irrational to lay users.

Placing aside the complexities we have identified concerning the concept, official status is a mark of authority and reliability for legal resources. Except for technical difficulties, never unexpected to web users, online legal resources published by the government are generally viewed as trustworthy. By association and the usual social processes whereby humans create a taken-for-granted world, print and other formats for the official legal resources are similarly viewed as authoritative and reliable. This is a common sense understanding of official status that ultimately informs the law profession’s understanding – most important judges’ understanding – of official legal resources.

AUTHORITY, RELIABILITY, AND AUTHENTICATION

Referring again to the Thesis III claim: with web resources the trust engendered by official status is misplaced – and at some level misplaced – where the official legal source is not safeguarded by authentication procedures.

It must be recognised that the web is a massive collection of texts. The “delivery-layer” of problems with textual information is well-known to users. Texts do not always render on our computer screen as they should. We have all seen garbled documents, even irregular PDF texts. Nearly every user understands that digital materials are inherently susceptible to corruption and tampering.

Beyond these pitfalls, publication on the web has a deeper set of problems related to long-term preservation and access. Librarians in the US and, it is hoped, the UK identify these as issues concerning permanent public access. As defined in AALL’s State-by-State Report on Permanent Public Access to Electronic Government Information, permanent public access is a policy and practice ensuring “applicable government information is preserved for current, continuous and future public access.”

The authentication procedures to which Thesis III refers are those bound up with ensuring permanent public access. The State-by-State Report on Authentication of Online Legal Resources addresses these authentication procedures.
Authentication may be understood as the overhead of technological or archival data management controls that ensure the integrity of electronic information, preserved indefinitely, as a substitute for paper technologies and conventional publications maintained indefinitely on library or archive shelves.

To state the requirements simply: the controls are analogous to justiciable certification procedures that ensure the authenticity of a print document, or a copy faithful to the original, but repeated continuously over time, acknowledging the characteristic fluidity of digital materials. Such controls may involve encryption, digital signatures, and public key infrastructure. These are technologies the US Government Printing Office plans to deploy for FDsys, the system intended to replace paper distribution of government documents. Authentication need not involve such technologies, however. One may look to archival standards for electronic records management and appropriate data handling methods.

**CRITERIA FOR OFFICIAL STATUS**

The State-by-State Report on Authentication of Online Legal Resources describes thoroughly our methodology used to determine which online legal resources are deemed as official. That method was inductive rather than deductive, since it is clear online official sources are a recognized category, even though statute- or rule-based support for such a status may sometimes be imperfect. Such situations invoke Thesis II claims that convention is carving out as official certain online legal resources. When we discuss specific online court opinions deemed as official this article strives to provide enough evidence to demonstrate our methods are sound.

One should note that our inductive method happens to begin from the vantage point of the lay citizen viewing the legal resource on the web. That was not our conscious design. It is simply an inevitable consequence of starting with what a website discloses about itself and then proceeding to uncover the supporting statutes or rules. That citizen perspective is, we believe, extremely valuable for understanding the meaning of our findings. It is also a key to a deeper understanding of the situation in the UK. Unlike the US, however, a deductive method in and of itself, beginning with statutes and rules, provides a definite answer for the UK.

**US AND UK INVENTORY OF CASE LAW ON THE WEB**

Beginning with the US and concentrating on state materials, we now review publicly-accessible online court decisions and name those deemed as official. Our discussion begins with an unofficial Ohio resource that provides an instructive contrast.

**Ohio court decisions**

The Supreme Court of Ohio database of opinions and announcements contains unofficial Supreme Court, Court of Appeals, and other opinions. The unofficial status of the opinions invokes Thesis I, involving laws that squarely address the official or unofficial status of the resource.

The database contains opinions starting from 1992, published as PDF copies of the court originals, enhanced with unique web citation information and numbering of paragraphs. If the opinion is also published in the state’s print official reporter or the Thomson West unofficial regional reporter, the online version includes citation information for locating the text in those sources. Consistent with Ohio’s universal citation rules, one could use and cite an opinion from the Supreme Court of Ohio database without having to consult any other version.

Pursuant to applicable court rules, selected Court of Appeals and other opinions are published in the print official Ohio Appellate Reports and the Ohio Miscellaneous Reports. According to Rule 9(C) of the Ohio Rules of Court, Rules for Reporting of Opinions:

“Should the Supreme Court cease publication of the Ohio Appellate Reports and the Ohio Miscellaneous Reports in a paper medium (which event shall not occur prior to July 1, 2006), the Supreme Court website may be designated the Ohio Official Reports for those opinions.”

The date limitation mentioned in the rule corresponded to provisions of the now-renewed contract with Thomson West, the state’s official reporter. The state law librarian for Ohio reports that the print official publications have not terminated.

The Ohio court rules potentially still could form the basis for designating certain online court opinions as official. The state law librarian concludes it is just a matter of time before the Supreme Court “takes the position that materials on its website are official.” The Supreme Court database of opinions and announcements makes no disclaimers of any type.

**New Mexico court decisions**

The New Mexico Supreme Court website provides official decisions of the Supreme Court and Court of Appeals. The official status of these opinions invokes Thesis II conventions, based on statutory language not directly addressing official status. The situation contrasts with the Ohio Thesis I unofficial court decisions.

The New Mexico Supreme Court website links to a database containing Supreme Court and Court of Appeals opinions starting from 1995, published as HTML text. The opinions provide unique web citation information and numbering of paragraphs, as well as citations to the print official version and the unofficial regional reporter. One could use these opinions alone and properly cite them in accord with New Mexico’s universal citation rules.
Statutes defining New Mexico’s court structure and administration give the New Mexico Compilation Commission responsibility for “receiv[ing] all opinions of the supreme court and court of appeals” and “caus[ing] them to be published in bound volumes to be known as the New Mexico reports.” The Compilation Commission is empowered “to publish, distribute or sell and keep current automated legal databases of publications” including “the New Mexico Reports.” As directed by an advisory committee appointed by the Supreme Court, the Compilation Commission has a broad mandate “to do all things necessary to keep current one or more computer databases of its publications.” The New Mexico Supreme Court website explains that it “is jointly maintained by” the Supreme Court and the Compilation Commission, but does not state that its database or other collections are official. The Supreme Court Clerk, however, “considers the final opinions published on that page to be official because of the court’s relationship with the Compilation Commission.”

It is significant that the Supreme Court website gives the following conspicuous, spare disclaimer: “Data is ‘AS IS.’” Coupled with the state’s hesitancy in declaring the website official, the disclaimer is good evidence for the Thesis III claim that trust engendered by official status is ill-placed where the resource is not safeguarded by authentication procedures.

More optimistically, the state’s online official court decisions may be viewed as part of a developing system or structure that would permit exclusive digital interaction with the courts. For online official court decisions, New Mexico may be unique; it is also noteworthy that the state has no less than three other primary legal resources deemed as official. These are its administrative code, administrative register, and a version of its statutes. Its online administrative code is the sole official source. New Mexico is anticipating the all-digital world.

**Michigan and New York court decisions**

Two additional states – Michigan and New York – have online official court decisions. Through special arrangements, the databases are made publicly accessible by the states’ print official publishers. Such materials present unique issues, particularly their use of extensive “as is” disclaimer information. They require a longer discussion than is possible here. The reader is referred to the forthcoming State-by-State Report on Authentication of Online Legal Resources.

**England and Wales court decisions**

Invoking Thesis I, the straightforward answer is “no” to the question of whether UK publicly available online court decisions are deemed as official. Strictly speaking there is no official series of law reports covering the courts of England and Wales.

This answer with respect to online court decisions fails to satisfy fully, however. Web publication represents an important break from the British mold whereby the selection of court judgments for publication had previously always been solely in the hands of editors of independently published law reporters. Court decisions published on Her Majesty’s Court Service website, fully discussed below, are selected by the very judges responsible for issuing them.

**Practice Directions on “official” reports**

One seeks to appreciate the significance of recent Practice Directions that have begun to label and privilege as official a reporter of the Incorporated Council of Law Reporting for England and Wales. (See Practice Direction (Court of Appeal: Citation of Authority), [1995] 1 WLR 1096, and Practice Statement (Supreme Court: Judgments), [1998] 1 WLR 825, which extended the reach of the first cited PD to cover all divisions of the High Court, as well as the Court of Appeal.) Although it is organized as a charity, the Incorporated Council fully exercises a proprietary copyright in its publications. The Practice Directions so privileging the Incorporated Council contradict the historical attitude of the courts that no law reporters are official. As a consequence, despite the recent recognition of a neutral citation system, which provides the practical means to identify online sources without regard to print, users must still locate and cite specified print sources that are restricted by copyright and not freely available. Even House of Lords decisions available on the Parliament website must be cited to a restrictive print source. Those public resources freely available on the web have, it seems, an untimely de-privileged status in a system now naturally equipped for judicial control of publication and that, in any case, historically had eschewed privileging any source.

The courts’ new use of the word official in connection with Incorporated Council law reporting is a topic of interest to Professor Roderick Munday. In a 2001 article in Justice of the Peace he wrote:

> This notion, that there are so-called “official” law reports, has progressively gained ground during the later part of the twentieth century. In 1987, for instance, we find Steyn J (as he then was) remarking that “surprisingly, there is no report of [a named decision] in the official law reports.” Even some academic writers subscribe to this view: Professor Atiyah, for example, has written of the “official law reports.”

> However, even if a convention is developing that there exist “official reports”, there may not yet be complete agreement as to which series are entitled to be so designated.

Munday goes on to quote the 1995 Practice Direction (Court of Appeal: Citation of Authority), which lays down a hierarchy of citation for the various reports:

> If a case is reported in the Official Law Reports published by the Incorporated Council of Law Reporting for England and Wales, that report should be cited. These are the most...
authoritative reports; they contain a summary of argument; and they are the most readily available.

If a case is not (or not yet) reported in the official Law Reports, but is reported in the Weekly Law Reports or the All England Law Reports, that report should be cited.

Munday examined earlier Practice Directions and concluded “it would seem that the ‘official’ designation . . . was intentionally added in the 1995 Practice Direction.”

**Practice Direction on neutral citation**

In 2001, the Lord Chief Justice, Lord Woolf issued a Practice Direction ordering that High Court and Court of Appeal judgments be given media neutral citations. *(Practice Direction (Supreme Court: Judgments: Form and Citation), [2001] 1 WLR 194.)* The neutral citation is the judgment’s official number and must be used when the judgment is cited in later judgments. “Once the judgment is reported, the neutral citation will appear in front of the familiar citation from the law report series.”

The stated purpose of the Practice Direction is “to facilitate the publication of judgments on the world wide web and their subsequent use by the increasing numbers of those who have access to the web.” The changes also assist in searching and electronic storage.

Especially relevant to our discussion of the official or unofficial status of online court decisions, the Practice Direction emphasized that “where a case has been reported in the official Law Reports published by the Incorporated Council of Law Reporting” – note the “official” – “it must be cited from that source.” Unfortunately, it appears persons desiring to work completely online have little choice but to use the proprietary online version of the law reports series. The note states:

*It will in future be permissible to cite a judgment reported in a series of reports, including those of the Incorporated Council of Law Reporting, by means of a copy of a reproduction of the judgment in electronic form that has been authorized by the publisher of the relevant series, provided that (1) the report is presented to the court in an easily legible form (a 12-point font is preferred but a 10 or 11-point font is acceptable) and (2) the advocate presenting the report is satisfied that it has not been reproduced in a garbled form from the data source.*

It is clear that a printout from the British and Irish Legal Information Institute (BAILII) would not be sufficient, even where the citation to an appropriate print reporter was located and cited to the court. Would the court accept a printout from LexisNexis Butterworths, which would give the All England Law Reports version of The Law Reports of the Incorporated Council of Law Reporting? Sources consulted within the judiciary indicate that the court would not approve the LexisNexis Butterworths printout, even under the circumstances of a proper citation to the appropriate print reporter.

In accord with Practice Directions concerning the preparation and filing of bundles of authorities under, for example, paragraph 15.11 of the Part 52 Practice Direction (as reproduced in the White Book Service on Civil Procedure and in Blackstone’s *Civil Practice*), the lawyer must deliver to the court a printout from Westlaw UK or Justis.com, where the judgment is published in *The Law Reports* of the Incorporated Council of Law Reporting. The citation and filing requirements for litigants without representation (pro se) are no less stringent.

The requirements for citation and filing profoundly affect decisions on the purchase of legal resources and the research practices of lawyers and citizens alike. Where lawyers generally have adequate means to address such court requirements, citizens typically do not. Impediments to citizens’ access to justice are sometimes not fully recognized.

**Perspective of UK citizens on court decisions on the web**

We conclude by examining publicly available online UK legal resources, as well as two other important sources that do not exactly fit the definition of publicly available. Doing this means taking the citizen perspective.

**British and Irish Legal Information Institute (BAILII).** This exceptional service is a natural starting point, as that is its special role in the UK. BAILII “includes most of the recent British and Irish primary legal materials that are freely available to the public.” The data comes from published or unpublished CD-ROMS or directly from responsible courts or government agencies. The resource has some material not available from any other free source. BAILII converts the data into a consistent format. Court decisions, as all its materials, are rendered in HTML capable of displaying, as highlighted text, the key words the user had searched. The later functionality is a result of BAILII’s adding “a generalized set of search and hypertext facilities” that allow for searching across all databases.

BAILII does not purport to be an official source and its disclaimer information references the 1995 Practice Direction (Court of Appeal: Citation of Authority), discussed above. BAILII’s disclaimer information begins with the following language:

*BAILII does not invite reliance upon, nor accept responsibility for, the information it provides. BAILII makes every effort to provide a high quality service. However, neither BAILII, its host Universities, nor the providers of data on BAILII, give any guarantees, undertakings or warranties concerning the accuracy, completeness or up-to-date nature of the information provided. Users should confirm information from another source if it is of sufficient importance for them to do so.*

Two sources outside of BAILII are especially significant. The House of Lords “Judicial Work” web pages and Her Majesty’s Courts Service “Judgments” web pages. Both of these resources fit the categories for comparable US publicly accessible online legal resources.
**House of Lords website.** The House of Lords is the final court of appeal on points of law for the whole of the United Kingdom in civil cases and for England, Wales and Northern Ireland in criminal cases. Its web pages on the UK Parliament website contain an unofficial version of all of its judgments starting from late 1996. The copies are HTML files, with links to PDF versions, starting in 2005. The judgments give neutral citation information, including numbered paragraphs. They do not give parallel citations for where the text is found in other publications.

Consistent with the UK’s neutral citation rules, one could not use and cite a judgment from the website without having to consult other sources, almost invariably *The Law Reports* published by the Incorporated Council of Law Reporting. The website gives no disclaimers about its accuracy or completeness.

**Her Majesty’s Courts Service website.** This resource contains an unofficial version of judgments, starting from 1996, selected by the responsible judges from the wide spectrum of courts within that service. The court decisions are HTML files with neutral citation information, where applicable.

Where the judgment is also published elsewhere — which is information not given by the resource — one could not use and cite a judgment from the website without having to consult other sources. The website gives the following disclaimer information:

“The contents of these pages are provided as an information guide only. No responsibility is accepted by or on behalf of the Secretary of State for Constitutional Affairs and Lord Chancellor for any errors, omissions, or misleading statements on these pages . . .”

**The WLR Daily summaries.** The Incorporated Council of Law Reporting for England and Wales (ICLR) website may be added to this list, inasmuch as the ICLR has been recognized as the source for “official” court decisions. It is not a publicly accessible source for court judgments. The WLR Daily does provide freely available summaries for decisions reported in its *Weekly Law Reports*, starting from 2005. Electronic versions of the decisions as reported in the “official” source are available to paid subscribers.

**WordWave International website.** For completeness’ sake, this site is mentioned as the home page for the parent organization of Smith Bernal Reporting, the official court stenographer. The transcripts available by paid subscription on its website do not purport to be official, but may be accepted as such in individual cases.

**CONCLUSION**

Why the House of Lords “Judicial Work” web pages and Her Majesty’s Courts Service “Judgments” web pages are not deemed as official must be somewhat vexing to citizens.

The answer to the question of why is, actually, in the final analysis, the UK courts’ answer to the authentication concerns we have raised concerning online legal resources. The UK insists that online legal resources be capable of authentication against official paper sources and authorized printouts filed with the court. The form this authentication takes is at the expense of the remarkable potential of the web to make official, authentic, and reliable online legal information publicly available to citizens and law researchers.

The US has begun to exploit some of the remarkable potential of the web, but it has not, at the state level, taken steps to ensure authenticity and trustworthiness.

Neither the US nor the UK is particularly well prepared for the all-digital world. It is hoped this article has identified some areas where each falls short and the reasons why. Attention might then be paid to changes in the structures and processes in law, institutions of justice, and the legal profession needed to ensure readiness for an all-digital environment.

That is actually something the US and UK want.

---
